

ABSTRACT

The present invention relates to all facets of a novel cutting tool designed to retrieving gel slice from an agarose gel and poly-acrylamide gel. The cutting tool is made of plastics or metal materials and consists of a tool body and a plug. The upper end of the rectangle tube is open. A plug is inserted into the rectangle tube from the upper end of the tube to form the cutting tool. The rectangle shape and the plug of the cutting tool make gel-cutting and gel-ejecting much easier and more precise.
